

THINNER V101

Article No. 0978

Cleaning and thinning agent. Solvent combination on an ester and hydrocarbon base.

Property profile:

V 101 is a very good solvent for uncured, cold-cured plastics such as Rofaplast BG and Rofaplast KB. Solvent-free, cold-cured plastics can be thinned or brought to a better working consistency if necessary for priming or sealing work by working in V 101 slowly.

Specifications:

Density: approx. 0.87 g/cm³ at 20°C
Flash point: approx. 48°C

Working instructions:

When cleaning tools and splashed material, uncured, cold-cured plastics can be completely removed with V 101.
When thinning, V 101 should be added slowly to the material to be thinned and stirred vigorously until the desired consistency has been achieved. In normal cases, 3-5% by weight V 101 is sufficient.

Notes:

Free of Xylene. In spite of this, ensure adequate ventilation when using. Avoid open fire and skin contact.

Packaging, application rate and storing:

Packaging: 1 l, 5 l, 10 l, 30 l tin containers

Application rate: According to needs.

Shelf-life: At least 2 years in closed, original containers, stored cool.

Safety, ecology, disposal:

Further information concerning safety during transport, storage and handling as well as for disposal is found in the latest Safety Data Sheet.

The statements above are compiled from our field of production and according to the latest technological developments and application techniques. Since application and working are beyond our control, no liability of the producer can be derived from the contents of this information sheet.
