# Sikafloor®-13 Pronto

# 2-part primer based on reactive acrylic resins

#### Sikafloor $^{\rm B}$ -13 Pronto is a two part, low-viscosity, fast curing primer based on reactive acrylic resins for the Sikafloor $^{\rm B}$ -Pronto Modular System. **Product Description** Sikafloor®-13 Pronto consists of: Sikafloor®-13 Pronto Resin Part A: Sika®-Pronto Hardener Part B: Uses Fast curing, low viscosity primer to achieve pore free cementitious substrate Characteristics / Very fast curing, even at low temperatures **Advantages** Solvent-free

Part of a complete modular system

### **Product Data**

Form				
Appearance / Colours	Part A: Si Part B: Si	kafloor <sup>®</sup> -13 Pronto: ka <sup>®</sup> -Pronto Hardener:	transpare white, po	ent, liquid owder
Packaging	Part A: Si Part B: Si	kafloor <sup>®</sup> -13 Pronto: ka <sup>®</sup> -Pronto Hardener:	25 kg, 20 0.96 kg k	
Storage Conditions / Shelf Life	From date of production if stored properly in original, unopened and undamaged sealed packaging, in dry conditions at temperatures between +5 ℃ and +30 ℃:

	Primer	Sikafloor®-13 Pronto	0.40 - 0.50 kg/m² per coat		
		retical and do not allow for ance profile, variations in level o			
Substrate Quality	The cementitious substrate must be sound and of sufficient compressive strength (min. 25 N/mm²) with a minimum pull-off strength 1.5 N/mm².				
	The substrate must be clean dry and free of all contaminants such as dirt, oil, grease, coatings and surface treatments, etc.				
	If in doubt apply a test area first.				
	The Sikafloor®-Pronto System is not suitable to be applied on any kind of asphalt!				
Substrate Preparation	Concrete substrates must be prepared mechanically using abrasive blast cleaning or scarifying equipment to remove cement laitance and achieve an open textured surface.				
	Weak concrete must be removed and surface defects such as blowholes and voids must be fully exposed.  Repairs to the substrate, filling of blowholes/voids and surface levelling must be carried out using appropriate products from the Sikafloor <sup>®</sup> , Sikadur <sup>®</sup> and Sikagard <sup>®</sup> range of materials.				
	The concrete or screed substrate has to be primed or levelled in order to achieve an even surface.				
	High spots can be removed by e.g. grinding.				
Application Conditions / Limitations					
Substrate Temperature	-10 °C min. / +30 °C max.

Mixing Time	Mix part A thoroughly further 1 minute.	y, then add th	e Hardener i	n the correct	quantity and	mix for a
	Over mixing must be	avoided to m	ninimise air e	ntrainment.		
	For ease of handling, 25 kg units may be split (2 x 12.5 kg) (refer to Mixing table). Always weigh out components.					
Mixing Tools	For indoor work, spark free mixing equipment must be used (explosion-proof)!					
	Sikafloor®-13 Pronto must be thoroughly mixed using a low speed electric stirrer (300 - 400 rpm) or other suitable equipment.					
Application Method / Tools	Prior to application, confirm substrate moisture content, r.h. and dew point.					
	Priming:					
	Normal non-porous surfaces:					
	Apply one coat of Sikafloor <sup>®</sup> -13 Pronto. Make sure that a continuous, pore free coat covers the substrate, i.e. minimum 0.4 kg/mm². If in doubt, apply another priming coat.					
	Absorbent surfaces:					
	Apply two coats wet on wet of Sikafloor®-13 Pronto until saturation of the substrate is achieved. For waiting time before overcoating see table "Waiting Time / Overcoating".					
	Apply Sikafloor®-13 Pronto using a "non-fuzzing", short-pile nylon roller.					
	The freshly applied priming coat can be blinded lightly with quartz sand 0.7 - 1.2 mm, consumption approx. 0.2 - 0.5 kg/m².					
Cleaning of Tools	Clean all tools with Thinner C immediately after use. Hardened and/or cured material can only be removed mechanically.

In order to ensure optimum curing during internal applications the air must be exchanged at least seven times per hour. During application and curing use a forced fresh air supply/exhausting of fumes with appropriate equipment (spark-free explosion-proof).					use a			
Systems based on reactive acrylic resins exhibit a characteristic odour during application and prior to achieving full cure, once fully cured they are taint free. All unpackaged goods should be removed from the area of the works during application. Do not apply in the presence of foodstuffs. Any foodstuffs, whether packaged or not, should be completely isolated from the flooring works during the application process and until the products are fully cured.  The incorrect assessment and treatment of cracks may lead to a reduced service life and reflective cracking.								
						If heating is required do not use gas, oil, paraffin or other fossil fuel heaters, these produce large quantities of both $CO_2$ and $H_2O$ water vapour, which may adversely affect the finish. For heating use only electric powered warm air blower systems.

## **Legal Notes**

The information, and, in particular, the recommendations relating to the application and end-use of Sika products, are given in good faith based on Sika's current knowledge and experience of the products when properly stored, handled and applied under normal conditions in accordance with Sika's recommendations. In practice, the differences in materials, substrates and actual site conditions are such that no warranty in respect of merchantability or of fitness for a particular purpose, nor any liability arising out of any legal relationship whatsoever, can be inferred either from this information, or from any written recommendations, or from any other advice offered. The user of the product must test the product's suitability for the intended application and purpose. Sika reserves the right to change the properties of its products. The proprietary rights of third parties must be observed. All orders are accepted subject to our current terms of sale and delivery. Users must always refer to the most recent issue of the local Product Data Sheet for the product concerned, copies of which will be supplied on request.

#### **CE Labelling**

The harmonized European Standard EN 13 813 "Screed material and floor screeds - Screed materials - Properties and requirements" specifies requirements for screed materials for use in floor construction internally.

Structural screeds or coatings, i.e. those that contribute to the load bearing capacity of the structure, are excluded from this standard.

Resin floor systems as well as cementitious screeds fall under this specification. They have to be CE-labelled as per Annex ZA. 3, Table ZA.1.5 and 3.3 and fulfil the requirements of the given mandate of the Construction Products Directive (89/106):

SR

<sup>&</sup>lt;sup>2)</sup> No performance determined.

The harmonized European Standard EN 1504-2 "Products and systems for the protection and repair of concrete structures - Definitions, requirements, quality control and evaluation of conformity – Part 2 : Surface protection systems for concrete" gives specifications for products and systems used as methods for the various principles presented under EN 1504-9.

Products which fall under this specification have to be CE-labelled as per Annex ZA. 1, Tables ZA.1a to ZA 1g according to the scope and relevant clauses there indicated, and fulfil the requirements of the given mandate of the Construction Products Directive (89/106):

Here below indicated are the minimum performance requirements set by the standard. For the specific performance results of the product to the particular tests, please see the actual values above in the PDS.
